The significance of the biological gasification process increased considerably. In particular, the connection of agricultural enterprises with the production of fermentation gas experienced a promotion. The contribution under consideration reports on the legal fundamentals for the establishment of a biological gas facility. The authors consider the pollution control legislation, hygiene right and the law of construction planning. The presentation of the building design legal validity of biological gas facilities is the focus of this contribution. Legal problems are pointed out with the establishment of biological gas facilities by means of a stock taking of the legal and official standards as well as the relevant jurisdiction. These problems are solved practice-orientedly.
